

# The Challenge of the Next Industrial Revolution – The Automation & Artificial Intelligence Revolution

Never has humanity had more access to knowledge and never have we disagreed more about what it means and how to apply it.

We are on the verge of an automation & artificial intelligence revolution that may leave society ill prepared to adjust sufficiently to a rapidly changing demand for workers.

---

## A Proposed Working Group for Thought Leaders

**Group Purpose:** To explore how this change may impact society using critical thinking techniques and open minded discussion to identify problems and develop potential solutions.

**Intent:** Involve thought leaders in business, education and government to:

- contribute to similar discussions, sharing our thoughts.
- offer our support in helping to energize the discussion and the change needed to meet this new challenge.

### **Proposed questions for discussion:**

1. How much of an issue is this, what are the problems that may arise and how soon could it be a problem?
2. Is our education system prepared to meet the challenge, if not in what direction does it need to go and how could we help it adapt?
3. As roles for work change, what concerns should we have about the social support net and how could we help others address these concerns?
4. What Next? . . .

## **An Open Working Group**

**1<sup>st</sup> Exploratory Session Scheduled – July 7<sup>th</sup> 7pm – 8pm!**

**at: 936 Market St, Suite 101, Fort Mill, SC 29708**

eMail: [Director@NewFutureLearning.com](mailto:Director@NewFutureLearning.com)
